

GrazeEzy – for the Grass-Affected Horse

MULTI-ACTION:

1. Offsets the high potassium and nitrates in green grass
2. Calcareous Red Marine Algae buffers gastric over-acidity
3. The best Magnesium for settling nerves when anxious, head-flicking, spooky, over-reactive, tender-footed, herd-bound and more!
4. Stabilises the internal environment of the whole digestive tract

HOW TO USE:

Introduce by starting with 10g (2 tspns) well mixed into each feed. There is no set amount – build up until you see significant improvement. When improvements are consistent you can reduce amounts.

As a general rule - less is required over dry spells, more when it rains. Increase when it STARTS to rain rather than waiting for the horse to get spooky etc.

NB: Due to inclusion of Red Marine Algae, GrazeEzy doesn't fully dissolve but still works when mixed with water and given by syringe.
